This book is the outcome of twenty years' work. In it is put forth a theory of the Origin of Vertebrates, which is based upon two fundamental propositions: (1) That the essential factor for the upward evolution of all animals is growth of brain power. (2) That each higher group of animals has arisen from some member of the highest group evolved up to that time, and not from a lower group.

All the evidence, whether anatomical, physiological, or palæontological, points to the conclusion that the vertebrates arose from the highest invertebrate group—the arthropods—which were the dominant race at the time when vertebrates first appeared.
